

BM53000 Wheel Play Detector

The BM53000 wheel play detector is a strong tester with two strong steel plates – one for each wheel. The wheel play detector features a range of options that allows for a customized configuration.

OPTIONS

Advantages

- Radio linked remote control avoids expensive downtime due to cable damage and the operator is not restricted in his work.

Installation

- Installed as split bed over an inspection pit

- Power unit is installed in the pit either at the end or inside an access in the wall of the inspection pit.

Applications

- Repair workshops.
- Vehicles inspection bodies.
